

About ORION II

The ORION II initiative will result in the rehosting and enhancement of the College's fully integrated ERP system. ORION is the College's implementation of the Integrow ERP solution developed by the Florida Community College Software Consortium, of which FCCJ is a member, and is based on Software AG's Adabas and Natural product set. Integrow runs natively in an IBM MVS operating systems environment and can be modified, as it is at the College, to run in the IBM VSE operating systems environment.

The College is moving to a Unix architecture hosted on the Sun platform form technology and cost advantages primarily a result of the elimination of the mainframe computing environment.

The rehosting of the ORION system and the resultant ORION II ERP involves the conversion of the Adabas and Natural environment from MVS to Solaris/Unix and the attendant changes in the ORION applications and elimination of JCL (job control language) through the creation of stored procedures. Additionally, the ORION II product will include native web services for integration with other college systems and a generic GUI interface.

ORION II will result in combined savings and cost avoidances in excess of \$1.0 million per year beginning in 2005.

The ORION II project has begun, this web site will serve as the primary resource for all status, information, contacts, and communications as the project progresses.
